

Assignment: Explore R Data

BIOS 967: Intro to R for Biologists

Dai Shizuka

updated 08/22/23

In Module 2 (Types of Objects), we introduced the “iris” dataset.

```
head(iris)
```

```
##      Sepal.Length Sepal.Width Petal.Length Petal.Width Species
## 1           5.1         3.5          1.4          0.2   setosa
## 2           4.9         3.0          1.4          0.2   setosa
## 3           4.7         3.2          1.3          0.2   setosa
## 4           4.6         3.1          1.5          0.2   setosa
## 5           5.0         3.6          1.4          0.2   setosa
## 6           5.4         3.9          1.7          0.4   setosa
```

You can get a list of pre-loaded datasets in R by running the code:

```
data()
```
